

Rustic Door Specifications

RS Doors manufacturing standards will be the same for our Rustic line of doors as our standard line. Material selection, however, will be quite different as our Rustic line is designed to have a very traditional or "Rustic" look.

Some of the main differences in characteristics included in our Rustic doors are:

- Considerable color variation, including brown and/or black sap, abundant mineral streaks, and large patches of dark colored wood.
- Open and/or closed knots. No minimum or maximum sizes
- Holes in knots up to max. 1/4" in diameter can go right thru the door.
- Small wormholes may be present
- Open knots on the inside frame edge are acceptable as long as the inside edge of the panel is not visible on the face of the door.
- Tight closed knots are acceptable on the outside edge of the door. Open knots are not acceptable as jagged edges could catch on clothing, fingers, etc.
- Surface checking or cracking is allowed in Rustic doors as this is a natural characteristic.

**RS Cabinet Doors Ltd. will not be responsible for doors that are judged by the customer to be too rustic, or not rustic enough.
